[Portfolio](#)

SKILLS & TECHNOLOGIES

Languages

Python, Java, TypeScript, C/C++

AI & Research

Computer vision pipelines, evaluation & regression testing, NumPy, SciPy

Backend & Data

Spring Boot, REST APIs, JWT auth, PostgreSQL

DevOps & Testing

Docker, Git, automated test suites

EDUCATION

M.Sc. Computer Science

Ben-Gurion University of the Negev

Researcher, Prof. Gera Wiess's Lab · 2026 – Present
(Expected Oct 2027)

Current GPA 95.

B.Sc. Computer Science

Ben-Gurion University of the Negev · 2022 – 2025

Final GPA 84.2 · Active swimmer, BGU ASA competitive swim team.

Coursework: Computational Models, Probability & Statistics, Intro to Computational Learning, Algorithms

ACTIVITIES

Teaching Assistant — BGU · 2026 – Present

Supervises practicum coursework for 100+ students; grades and examines student work.

Individual/Group Swimming Instructor — Wingate Institute · 2014 – Present

Teaches fundamentals and advanced technique to swimmers of all ages.

Volunteer Math & CS Tutor — BGU · 2026 – Present

PROFILE

Computer Science M.Sc. student at Ben-Gurion University of the Negev, seeking a software engineering internship. Drawn to problems where the hard part is knowing whether the answer is right — measuring what a system truly does, separating my own mistakes from the limits of the measurements, and reporting both numbers rather than the flattering one. Built and shipped a federation-scale platform end to end alone, and work as comfortably inside a research group as with the people who actually use what I build.

RESEARCH

Swimmer Biomechanics Research — Prof. Gera Wiess's Lab

Ben-Gurion University of the Negev · in collaboration with Prof. Raziel Reimer, Faculty of Engineering · 2026 – Present

- Conducting cross-disciplinary research applying computer vision and control theory to competitive-swimming biomechanics, bridging the Computer Science and Engineering faculties.
- Built Python pipelines that reconstruct swimmer joint motion from 3-D underwater pose-estimation data, using forward/inverse kinematics and nonlinear least-squares optimization to drive a third-party hydrodynamic simulation engine.
- Diagnosed systematic model-fitting errors (degenerate optimization bounds, skeletal geometry mismatches) via quantitative probing against ground-truth motion-capture data, and built the evaluation and golden-file regression suite that separates code error from data limits.

FEATURED PROJECT

SwimEdge — Full-Stack Competitive Swimming Platform

Founder & Sole Engineer · 2025 – Present · GitHub

- Took a full-stack platform for swimmer analytics and competition management from concept to production single-handedly, motivated by a gap identified firsthand as a competitive swimmer.
- Engineered a modular, service-oriented Spring Boot + PostgreSQL backend and a custom PDF/Excel parsing pipeline for Israeli Swimming Association data, backed by automated test suites and Docker container builds.
- Engaged external stakeholders directly — the Israeli Swimming Association and the Ministry of Sport — translating federation regulations into system requirements and presenting the platform to leadership.

MILITARY SERVICE

Combat Commander, Paratrooper Brigade, IDF

2016 – 2019

- Trained and mentored newly recruited soldiers; led operations and managed company-level logistics.

Reservist, Paratrooper Brigade, IDF

2019 – Present

- Lead frontline teams under pressure, maintaining calm and accountability.
